PROJECT LEADERSHIP

Sequence, Inc. consultants know the importance of completing a project on time and within budget while adhering to the stringent quality standards mandated by regulatory agencies and industry. Our consultants ensure the success of each initiative by taking ownership of client's projects from the minute they join the team. Initially, a Sequence representative works closely with the client to determine the project goals and define a realistic timeline. This information is then transferred to a formal project plan which is used throughout the entirety of the project. Once the path is set to move forward, our consultants immediately begin to bring the project team together in a cooperative effort so that progress may be leveraged by each member's contribution. The primary goal for a Sequence project management consultant is to achieve a balance between the constraints (i.e., scope, cost, and schedule) that directly impact the quality of a project. The three main constraints cannot be altered without directly impact each other and quality in turn. Utilizing our effective project management strategies, we ensure you that our consultants will lead your organization towards a successful project implementation.

AUDITING

Sequence, Inc. specializes in operating in GxP environments and has the experience to perform an impartial third-party audit of a client's quality system. Sequence has experience performing audits for domestic and international Clients throughout the Pharmaceutical, Biotech, and Medical Device industries.

Sequence, Inc. performs audits to ascertain the validity and reliability of information and also provide an assessment of a system's internal control. Auditing is a critical tool to ensure your company is operating optimally by identifying issues that may cause a disruption in the production process. Solutions are then implemented to either eliminate or reduce the risk identified through the audit process.

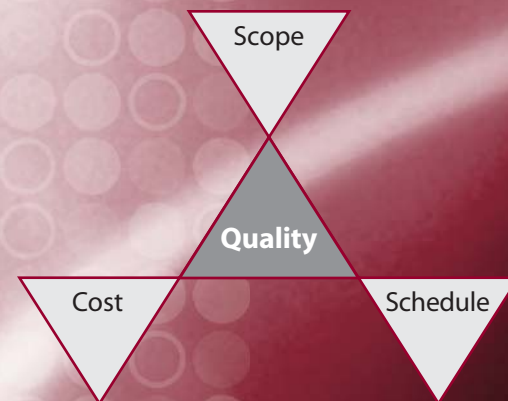

SOP DEVELOPMENT

Sequence, Inc. has experienced validation personnel available to assist in developing and implementing Standard Operating Procedures to ensure your organization is operating consistently across business areas.

21 CFR PART 11 ASSESSMENT & REMEDIATION

21 CFR Part 11 compliance is an essential requirement for implementing any computer system with electronic records that are created, modified, maintained, archived, retrieved, or transmitted under any records requirements set forth under FDA regulations. Sequence, Inc. consultants are not only current on the latest industry trends and guidance documents issued by the agency, but also have extensive experience validating systems that fall within the guidelines of the regulation. Whether you have legacy systems you would like us to assess and remediate or if you are contemplating purchasing a new system in which you are unsure of the compliance status, Sequence, Inc. is here for you.
